

SCDOT Construction and Resource Manager Program

PB has provided South Carolina DOT with a full range of management, procurement, and implementation services needed to deliver a transportation program of 200 projects on an accelerated basis. The services provided under the Construction and Resource Manager Program include:

- Construction management
- Construction phasing, engineering, and inspection
- Bid document preparation
- Financial management, including cash flow forecasting
- Utility relocation coordination
- Right-of-way acquisition
- Final design management
- Environmental permit acquisition

The PB team served as an extension of SCDOT staff, providing the state considerable flexibility as geographic, function, and overall program needs changed. The approach provided SCDOT with a rapid expansion of its staff capacity, which contracts quickly as projects are completed.
